|  | O.G. CLOCK DUST COVERS Authentic dust covers carved from solid wood, to fit over O.G. and other American clock weight pulleys. 115mm long x 22mm wide and 15mm high. Sold in pairs. | 0980 000215 | In our Central Store | Availability: Click Here |
|---|---|-------------|----------------------|--|

HOLE END CLOCK MAINSPRINGS

Made of quality spring steel. Our stainless springs are made from specialist material, intended for use in clocks. It is not the stainless 'seat-belt' quality steel that has appeared on the market in recent years, which many horologists feel is too strong for clock use. Eyes are fitted at both ends, with a short section of steel softened to ensure a good fit to the barrel and arbor. Each spring is wound to the barrel diameter shown, but it is good practice to release the spring and clean and lubricate it with mainspring grease before fitting with a mainspring winder. Manual insertion of large springs can cause distortion. The material is the nearest metric/imperial equivalent. Three dimensions are required to select a spring:

- A. Height or width in mm.
- B. Strength or thickness in mm.
- C. Internal barrel diameter in mm.

Determining the spring by its length is not recommended as it may have been shortened as a result of a previous fracture. The length of a mainspring can be calculated for an empty barrel as follows:

Conversion Table

| | |
|-----------------|---------------|
| 0.008" = 0.20mm | 1 1/8" = 29mm |
| 0.010" = 0.25mm | 1 1/4" = 32mm |
| 0.012" = 0.30mm | 1 3/8" = 35mm |
| 0.014" = 0.35mm | 1 1/2" = 38mm |
| 0.016" = 0.40mm | 1 5/8" = 41mm |
| 0.018" = 0.45mm | 1 3/4" = 45mm |
| 0.020" = 0.50mm | 2" = 51mm |
| 0.022" = 0.55mm | 2 1/8" = 54mm |
| 0.024" = 0.60mm | 2 1/4" = 57mm |

1. Driving Mechanism

The spring should occupy 1/3 to 1/2 of the space. The calculation assumes 1/2. 80% of the length calculated is sufficient.

2 1/2" = 64mm

Length = (((3.142 x (D/2)x(D/2))-(3.142 x (d/2)x(d/2)))/2)/t Where: **D = Internal barrel diameter d = arbor diameter t = thickness of material**

Important note about the dimensions:

Our springs are listed in metric, but from time to time we have to manufacture from imperial material. There may therefore be a small difference between the size stated and the actual measurement. We only use material which we consider near enough not to cause a problem. New mainsprings are not wound accurately to match the barrel diameter. They are often coated with a rust-resistant chemical, which is not a lubricant. We strongly advise customers to release the spring with extreme care, wipe the surface clean, and fit it using a spring winder. It should then be lubricated with high-pressure oil or mainspring grease. It is not essential to cover every part of the surface with lubricant initially, because the process of winding and unwinding will spread it evenly over the surface. The barrel diameter shown is an indication of suitable length. Springs are cut to the correct length and then coiled by hand and retained by a wire. As a result, the wound diameter may not exactly match the diameter shown. It is not recommended to attempt inserting a coiled spring into a barrel. If the nearest spring is too long, you can easily shorten it. Soften the spring where you want the end to be by heating it gently. Cut it to length with shears and copy the shape of the original hole using a drill and file. Do not overheat, as the material will be too soft and may tear later.

HOLE END CLOCK MAINSPRINGS

Many of M&P's mainsprings were produced in-house using high quality British carbon steel to BS5770.

| SPRING STEEL 3m, 19mm x 0.35mm When we relocated to Brighton we found some spring steel, made in the UK 30 years ago. Sheared ends. Due to its age, some may have superficial rust marks. | 1432 303415 | In our Central Store | Availability: Click Here |

LOOP END CLOCK MAINSPRINGS

The measurements required to identify a spring are: Width in mm, Strength or thickness in mm and Length in mm.

It makes no difference to the clock if the end is riveted or not. Although American clocks were originally fitted with riveted end springs, it is much easier to replace them with open loops. Riveted ends can be removed simply by heating to red heat and cutting off with snips. Assemble the clock with no springs. This makes it easier to get all the striking train in the correct sequence. Simply fit the inner end to the arbor, and wind most of the material onto the clock. Slip the open loop over the pillar, ensuring that the tail fits between the coils.

Mainspring clamps ref: 0249 000215 are ideal for holding loop end springs while working on the movement. Please refer to the index.

LOOP END CLOCK MAINSPRINGS

LONGCASE CLOCK ROPE

Woven linen Longcase (Grandfather) clock cord. For 30 hour clocks. Clock rope needs to have a central core, unlike normal rope or sash cord which is not suitable.

Instructions: Remove the old rope putting ordinary string in its place if uncertain about the correct route. Position the new rope. The join must not be thicker than the rope. There is a centre core which should be knotted and is strong enough to take the weight. Cut the rest at varying lengths to spread the join along the rope and sew loosely with extra strong cotton.

| 400 DAY CLOCK SUSPENSION WIRES Available in a range of thicknesses. Length 140mm. Width 0.5mm Due to the wide variations in characteristics of spring steel and because many older suspensions were made of bronze, it is impossible to supply a replacement wire simply by measuring the old one. Only a laboratory can establish the spring characteristics of the material. It is most important that the correct wire be fitted if a lot of wasted time is to be avoided. To establish the correct replacement, you must refer to 'Anniversary Clock Identification' by Mervyn Passmore (our part number 0412 21226) or the 'Horolovar 400 Day Repair Guide' (our part number 0412 000126) or send us an actual size scale drawing or photocopy of the blackplate of clock movement, showing all holes, screws and any text marked, for us to do this on your behalf. From this we can establish which factory made the movement. WE MAKE A SMALL SAMPLES CHARGE FOR THIS SERVICE. The name on the dial is often irrelevant. Please indicate whether a complete unit or just the wire is required. When only the wire is available, you may need to purchase a pack of blocks and forks. The kind of drawing we need to identify the model is shown. Please do not email it, because we cannot be certain that it will print out the same size. We have to compare your drawing with hundreds of similar actual size photos and drawings. Likewise, photos are no use for this purpose. www.anniversaryclockidentification.com has a free online 400 day movement identification system. | | | | |

400 DAY CLOCK SUSPENSION UNITS

These units are assembled in individual jigs. The width and thickness of the spring may not be the same as for the spring which it replaces, but its torsion characteristics are nevertheless correct.

Due to the wide variations in characteristics of spring steel and because many older suspensions were made of bronze, it is impossible to supply a replacement wire simply by measuring the old one. Only a laboratory can establish the spring characteristics of the material. It is most important that the correct wire be fitted if a lot of wasted time is to be avoided.

To establish the correct replacement, you should refer to one of the specialist books on the subject, such as 'Anniversary Clock Identification' by Mervyn Passmore (0412 021226) or the 'Horolovar 400 Day Repair Guide' (our part number 0412 000126).

www.anniversaryclockidentification.com has a free online 400 day movement identification system.

Alternatively you can send us an actual size scale drawing or photocopy of the blackplate of clock movement, showing all holes, screws and any text marked, for us to do this on your behalf. From this we can establish which factory made the movement. The name on the dial is often irrelevant. Please indicate whether a complete unit or just the wire is required. When only the wire is available, you may need to purchase a pack of blocks and forks. The kind of drawing we need to identify the model is shown. Please do not email it, because we cannot be certain that it will print out the same size. We have to compare your drawing with hundreds of similar actual drawings. Likewise, photos are no use for this purpose.

|---|--|--------------------|----------------------|--|

FRENCH CLOCK PENDULUMS

As a guide, small French timepieces used pendulum No. 0, standard striking models took No. 1 and movements with larger than average diameter plates took No. 2. Many French clocks have a number on the bottom of the backplate, indicating the pendulum length e.g. 4.2. Multiply the first number by 27.07. Multiply the second number by 2.256. Add them together and you will have the pendulum length in mm. Don't use the serial number by mistake!

FRENCH CLOCK PENDULUMS

Top of rod on standard rods is unthreaded, as this may need to be shortened. For a professional fit, tap and thread using 2.5mm x 0.45mm tap & die. Hooks supplied unthreaded as they might need to fit an existing rod.

|  | CARRIAGE CLOCK DOOR SECTION: BRASS 3.1 x 4mm. Length: 455mm. | 0907 314715 | In our Central Store | Availability: Click Here |
|---|---|--------------------|----------------------|--|

INSERTION MOVEMENTS

For china and wooden cases. Quartz movements have second hands.

These normally fit into two types of case:

A. China or metal cases, generally with circular holes in the front and back surfaces. The inside is hollow.

B. Wooden cases, where a plain hole has been drilled right through the solid body.

Mechanical movements are unsuitable for solid cases, because the spring has to expand into the hollow body. If it is restricted by a solid case, the clock will stop long before the spring has unwound. These movements are held in place simply by clamping the front bezel and the backplate together using screw threaded shafts and nuts. The case is sandwiched between the two. The diameter of the front bezel and backplate are therefore important when selecting a suitable unit. To select a suitable movement, identify a model that has a bezel large enough not to pass through the front hole.

4. Complete Movements & Kits

Clearly the movement diameter must be less than the front hole or it cannot be inserted. Movement backplates on modern clocks are fairly small compared to some old china clocks, and you may need to improvise if your case has a large hole in the back.

30 HOUR INSERTION MOVEMENTS

Suitable for hole depth of 32-45mm. European made.

5. Dials

Supadial transfers. Card & metal dials. Glass-fibre and enamel dials etc.

SUPADIAL TRANSFERS

SupaDial Transfers can be applied to almost any clean flat surface that can withstand being moistened. The numerals and minute divisions are pre-positioned. The time taken to apply a transfer is normally only a couple of minutes compared to laborious hand painting. Each transfer comes with full instructions. The size given is the diameter of the time track. SupaDial transfers cannot be applied to card and will not adhere to acrylic lacquers and some plastics.

Our SupaDial transfers make your dials look re-painted at a fraction of the cost. Just soak in water, slide the image onto a clean flat surface and position. Remove any trapped air bubbles and allow to dry. When fully dry (and not a moment before) peel off the backing leaving only the solid image behind - just as if you'd done it with a brush!

| ASSORTED DRY TRANSFERS Price per unit | | | | |
|  | ASSORTED DRY TRANSFERS Makers names for card & metal dials. Trade marks & names, including: Ansonia, Gilbert, New Haven, Sessions, Seth Thomas, Waterbury & E.N. Welch. Many duplicated according to popularity. | 0155 000102 | In our Central Store | Availability: Click Here |
| COLOURED DRY TRANSFER SPANDRELS Price per unit | | | | |
|  | COLOURED DRY TRANSFER SPANDRELS For American and German dials. 2 sets per sheet. Blue. | 0576 002021 | In our Central Store | Availability: Click Here |
| CARD DIALS All card (not metal) dial sizes shown are diameters of printing. There is at least 1/2" of plain card around each dial, unless shown otherwise. As a guide, you can work out the approximate numeral height by dividing the diameter of printing by the following numbers. N = 7.6, AN = 8, R = 6.35, RL = 6, RS = 8. Thus the numeral height of a 6" N is 6/7.6 = 0.79" You can use the same formula for SupaDial Transfers, but remember it is only a guide and is based on the figure 12 or XII. | | | | |
| CARD DIAL STYLE N Bold Arabic numerals. Semi-gloss is a matt white. Gloss is a gloss white which looks like enamel when behind glass. Antique is a matt off-white that looks a little aged. Price per unit | | | | |
|  | CARD DIAL STYLE N 4in ANTIQUE | 0001 040001 | In our Central Store | Availability: Click Here |

PUBLIC CLOCK DIALS

Glass-fibre dials for exterior clocks made from gel-coated rigid GRP, Convex, with a re-enforcing ring around the perimeter. The numerals are very slightly raised on the surface ready to gild. The following sizes and colours are normally available from stock. Various colours are available to special order. Dials can be supplied with Arabic numbers or to any other customer specification, but this usually incurs additional mould costs. We can also supply dials for rear illumination. Using these dials with our movements, hands, weathervanes and other sundries spectacular public clocks can be created.

| Nominal Size | Outside diameter | Actual face diameter | Numeral height | Nominal Size | Outside diameter | Actual face diameter | Numeral height |
|--------------|------------------|----------------------|----------------|--------------|------------------|----------------------|----------------|
| 1' | 330mm | 270mm | 40mm | 4' | 1210mm | 1075mm | 165mm |

DIAL RESTORATION

For many types of clock, such as bracket, longcase etc. it is both wrong and impractical to replace the dial just because it looks a little tatty.

We offer a dial restoration service for these situations, and can either touch up the original or strip the dial back to the bare surface and start again. We can do this on almost any surface, including candle clock globes. These can be blown to order if needed.

Because the condition of a dial has so much bearing on the restoration and repainting cost, we can't give a price without seeing the job. We can sometimes give a rough figure by phone if the work can easily be described, but dial painting is a very labour intensive and the work is very skilled. A digital photo emailed to us is the best way to obtain a quote. We need to see any dial that has colour work on it before we can give a definite price.

SPUN BRASS OFFICE DIAL BEZELS.

Item comes with a site ring. This ring can only be used when fitting flat glass. The ring must be removed and glazing plaster (0703 000115) used instead when fitting convex.

Very high quality bezels, spun from solid brass. Supplied with hinge, tab soldered in place. Unglazed. Although the bezel is made from solid brass, the reflector ring is aluminium. Sizes are nominal, to suit dials of the size shown. If convex glass is to be fitted, the ring should be discarded and glazing plaster used instead.

Price per unit

| | | | | |
|---|---|-------------|----------------------|--|
|  | OFFICE DIAL BEZEL, Antique style, 16inch Spun brass bezel with solid brass sight ring. Aged appearance. 16 3/4inch (425mm) o/d. Weight 285g. Hinge and tab fitted. Polished brass. Inside diameter of sight ring 385mm. | 1468 001615 | In our Central Store | Availability: Click Here |
|---|---|-------------|----------------------|--|

ROUND CLOCK GLASSES ROUGH-EDGE CONVEX

We stock an enormous range of convex glasses for clocks, barometers, instruments etc. We can also make them to your requirements, even in small quantities. As glass sizes vary in production, the size given is the nearest 1/16" upto 12". For 12" and above, the size given is accurate to within 1/8".

Because we have to cut the circle before it is bent, we cannot produce them to an accurate size without grinding them down afterwards. You can make small adjustments with emery paper. All round convex glasses are made from 2mm glass up to 15" when 3mm is used. The price of large glass varies tremendously due to supply and demand. It is very costly for us to make small quantities. If you need a glass not shown, please enquire.

GLASS DOMES - ROUND

Most of these domes are hand-blown so slight variations in the size and shape will occur. There is also the possibility of small imperfections and bubbles in the glass, as found on many antique domes. The process of manufacture has hardly changed in 100 years. Please enquire for any size of dome not shown in this list. Glass is excluded by carriers for insurance purposes, so domes are now generally sent at your risk. Small round domes are fairly robust, but large domes are better collected by arrangement. Domes cannot be made to order in other widths because of the enormous cost of the tool needed. Please note that a minute logo may appear on the base of some domes. The diameter given is the outside.

Price per unit

7. Bezels & Glass

The glass thickness varies from 1-2mm.

HAND-MADE DISPLAY CASES

These beautifully made display cases are the perfect answer when a dome is not available. Delicate mahogany beading and clear glass combine to make a perfect dust-free display. They are made to order, and can be almost any size. Toughened glass is used for large exhibition cases. Please contact us with the internal height, width and depth of the case you want and we will quote you the price and approximate delivery time.

8. Decorative Glass & Backboard Labels

Glass painted tablets & Decals. Backboard labels.

GLASS TABLETS FOR AMERICAN CLOCKS

These are made by us in a similar way to those made in America in the 19th Century, and are coloured by hand using carefully matched colours. All patterns are taken from the originals, and all original imperfections are retained for authenticity.

If you wish to make use of our glass cutting service, please be sure to supply exact measurements of the glass required. Shapes other than squares, rectangles and circles should be accompanied by a template. Panels requiring cutting cannot normally be despatched immediately, and may be subject to 7-10 days delay.

We have a fixed cutting charge: **0569 000115 £10.00**

ORANGES, PATTERN W6

ORANGES TABLET W6 Multi-coloured scene with line drawing in gold. As this panel has no border, it is particularly suitable for cutting to unusual shapes. A border can look out of proportion to the door when cut down in one dimension more than the other. The line drawing is 4 1/4" x 6 1/2" at the widest points.

WATERSLIDE TRANSFERS FOR GINGERBREAD CLOCKS

Waterslide transfers AA to WW are about 6" wide and suit 5 1/2" dial pans. They are intended for 'Gingerbread' clocks. Supplied with full instructions. To apply, soak in luke-

8. Decorative Glass & Backboard Labels

warm water for a few seconds. The transfer loosens from the backing paper and slides onto the glass. Remove any air bubbles and allow to dry.

TAPS

Taps are made in three types: 1st or taper for starting the thread, 2nd for completing the thread through a plate and the 3rd or bottoming for blind holes. Taps should generally be lubricated with light oil for brass and soluble oil for steel.

Taps go through holes slightly smaller than the tool, so as to cut a thread. This is the 'tapping drill'. The 'clearance drill' is the hole the screw will pass through without touching the thread.

Clearance Table

| | |
|------|--------|
| 2BA | 4.80mm |
| 3BA | 4.20mm |
| 4BA | 3.70mm |
| 5BA | 3.30mm |
| 6BA | 2.90mm |
| 7BA | 2.60mm |
| 8BA | 2.30mm |
| 9BA | 2.00mm |
| 10BA | 1.80mm |
| 12BA | 1.40mm |

Tapping Drill Table

| | |
|------|--------|
| 2BA | 4.00mm |
| 3BA | 3.40mm |
| 4BA | 3.00mm |
| 5BA | 2.60mm |
| 6BA | 2.30mm |
| 7BA | 2.00mm |
| 8BA | 1.80mm |
| 9BA | 1.50mm |
| 10BA | 1.40mm |
| 12BA | 1.00mm |

CLOCK KEY SIZES

There are two key numbering systems: English and European. As a result, you can't order a key by quoting the number on an old one unless you know which system that number refers to! Our keys are made to the metric size shown alongside each key. The table to the right shows the two sizes a numbered key could be. We have shown the English sizes in their nearest metric equivalent.

| | Key No. | English | European | Key No. | English | European |
|--|---------|---------|----------|---------|---------|----------|
| | 000 | 2.00 | 1.75 | 10 | 4.40 | 4.75 |
| | 00 | 2.20 | 2.00 | 11 | 4.60 | 5.00 |
| | 0 | 2.40 | 2.25 | 12 | 4.80 | 5.25 |
| | 1 | 2.60 | 2.50 | 13 | 5.00 | 5.50 |
| | 2 | 2.80 | 2.75 | 14 | 5.20 | 5.75 |
| | 3 | 3.00 | 3.00 | 15 | 5.40 | 6.00 |

10. Clockmaker's supplies

| | | | | | |
|---|------|------|----|------|------|
| 4 | 3.20 | 3.25 | 16 | 5.60 | 6.25 |
| 5 | 3.40 | 3.50 | 17 | 5.80 | 6.50 |
| 6 | 3.60 | 3.75 | 18 | 6.00 | 6.75 |
| 7 | 3.80 | 4.00 | 19 | 6.20 | 7.00 |
| 8 | 4.00 | 4.25 | 20 | 6.40 | 7.25 |
| 9 | 4.20 | 4.50 | | | |

WATCH & BROCCOT KEYS

Plated key with brass handle. There are two numbering systems. One system uses size 12 as the largest, and the other uses the reverse. It is important to order by size and not by number.

LEATHER WATCH & JEWELLERY POUCH

Price per unit

SUEDE WATCH & JEWELLERY POUCH Ideal for pocket watches and other gold and silver items. **0968 071002**
Protects from scratches and keeps them clean when not in use. 75 x 100mm. With draw strings.

In our Central Store Availability: [Click Here](#)

RUST INHIBITING PAPER

Price per unit

RUST INHIBITING PAPER **0981 001015**
Sheets of brown paper impregnated with rust inhibiting chemicals. Wrap valuable tools and instruments in this to protect them when not in use. Store vulnerable materials in it or just pop a small strip in with the goods - you'll notice we normally do this for you with tapered steel pins etc. 10 sheets, 9" x 12"

In our Central Store Availability: [Click Here](#)

MOTHER OF PEARL

Genuine pieces of Mother of Pearl for repairing damaged and missing inlay. Two types are available. We supply high quality rectangles of guaranteed finish and dimensions ideal for escutcheons etc. or packs of smaller 'scrap' pieces for repairs. 80% of the surface of the scraps is useable and are excellent value when replacing flowers, shell patterns etc. as more than 20% is usually discarded anyway.

Price per unit

MOTHER OF PEARL, SCRAPS Packs of 5 odd strips of 1.5mm thick 'scrap'. Sizes vary, from approximately 25 x 30mm pieces upwards. **0995 002415**

WHICH BROACHES TO BUY?
Our bush list shows the internal and external diameters. The clocks you specialise in will often need bushing in the same places, and will use similar bushes. The outside diameters rise in regular steps so select broaches just larger than the bushes you use. The assortments should cover most internal adjustments.

CYCLOIDAL CLOCK & WATCH WHEEL & PINION CUTTERS

(See appendix for details)

A range of finest quality cutters made from high speed steel hardened and treble tempered under vacuum. This steel, with a hardness circa 68 Rockwell C. maintains a good cutting edge which offers long periods between sharpenings. Brass for wheels should be hard or half-hard, with a typical composition of 61-64% copper, 1-2% lead and the balance zinc. Soft brass will clog the cutter. Steel for pinions should be free cutting silver steel with a typical composition including 1% Carbon, 0.55% Manganese and 0.20 Selenium.

PINION CUTTERS, 8 LEAVES FLAT BOTTOM

M = module in mm. D = Diametral pitch in teeth/inch. O = Outside diameter (nominal). T = Thickness (mm). All cutters have 12 teeth and a Bore Diameter of 7.00 mm except pinion cutters with a modulus smaller than or equal to 0.35mm which have a bore diameter of 3.5mm.

13. Books

Repair & reference books.

| BOOKS | | Price per unit |
|---|---|---|
|  | ANNIVERSARY CLOCK ADJUSTING by Mervyn Passmore The definitive guide on setting up and adjusting 400 Day or Torsion Clocks. (Also available in French & German) This has got to be the definitive guide to setting up and regulating Anniversary or 400 Day Clocks. The book gives a short history of the clocks and the evolution of their suspension wires, but mainly consists of detailed instructions on adjusting the escapement, suspension and pendulum. Included are copies of the rotation scales and setting up leaflet widely used by the trade. An excellent book for all those who work on these clocks or simply own one. 47 pages. Soft cover. | 0412 016226 In our Central Store Availability: Click Here |
|  | REPAIRING YOUR OWN CLOCK by Mervyn Passmore Written in plain English with no complicated theories or technical terms. It isn't a horology course. It will assist owners to get a low value but perhaps sentimental clock back in working order. 76 pages. Soft | 0412 022726 In our Central Store Availability: Click Here |
|  | ANNIVERSARY CLOCK IDENTIFICATION 2nd Edition by Mervyn Passmore Illustrated guide to the identification of Anniversary Clocks using width & height of the backplate. Covers mass produced 400 day movements from 1900. 800 photos. 29 manufacturer chapters. | 0412 021226 In our Central Store Availability: Click Here |
|  | L'AJUSTEMENT DES PENDULES 400 JOURS de Mervyn Passmore. Mervyn Passmore explique, dans un langage simplifi, que faire, comment le faire et ... quel moment. Texte en français. 72 pages, reliure en spirale canadienne. 32 illustrations. | 0412 020926 In our Central Store Availability: Click Here |
|  | IDENTIFICATION DES PENDULES 400J de Mervyn Passmore (text in French) Illustrated guide to the identification of Anniversary clock movements using the width & height of the backplate. Covers 400 day movements from 1900. Profusely illustrated. | 0412 022026 In our Central Store Availability: Click Here |
|  | JAHRESUHR JUSTIERUNG von Mervyn Passmore Jeder kann diese feinfhigen Jahresuhren auf und einstellen, dies jedoch schnell und genau auszufhren geht nur mit einem Wissen ber deren Funktionen. This has got to be the definitive guide to setting up and regulating Anniversary or 400 Day Clocks. The book gives a short history of the clocks and the evolution of their suspension wires, but mainly consists of detailed instructions on adjusting the escapement, suspension and pendulum. Included are copies of the rotation scales and setting up leaflet widely used by the trade. An excellent book for all those who work on these clocks or simply own one. 47 pages. Soft cover. | 0412 021026 In our Central Store Availability: Click Here |
|  | HOROLOGICAL HINTS AND HELPS by F.W.Britten This book, with a self-explanatory title has enjoyed constant popularity over fifty years. 374 pages. Hard cover. | 0412 003326 In our Central Store Availability: Click Here |
|  | WATCH & CLOCKMAKERS HANDBOOK, DICTIONARY AND GUIDE by F.J.Britten The definitions, illustrations, tools, processes and theory found in this work are quite indispensable. | 0412 003426 In our Central Store Availability: Click Here |
|  | WATCHMAKER'S & MODEL ENGINEER'S LATHE by Donald de Carle The bulk of de Carle's original text, most of which is concerned with matters of basic construction, selection, care of and accessories for the lathe and its uses, has been retained. Likewise the section 'Lathes of the World' for it represents an unparalleled source of detailed information on lathes and accessories, the manufacture of which ceased many years ago. The current scene is dealt with at length in the final section. 'Lathes Today', and is the result of extensive world-wide research prepared with the full co-operation of the manufacturer or the manufacturer's agent. Another unique feature is the directory of lathe, tool and material stockists which has been completely revised for this new edition. This is the current edition that includes the 1993 revisions. 220 pages. Hard cover. | 0412 001126 In our Central Store Availability: Click Here |
|  | PRACTICAL GILDING by Peter & Ann Mactaggart This book describes the process of gilding in great detail. The gilding process is not difficult, but has always been surrounded in secrecy. The tools and recipes of the trade are described, and there are also chapters on Oil Gilding, Gesso and Water Gilding. An excellent book. Soft cover. 72 pages. | 0412 016126 In our Central Store Availability: Click Here |
|  | GUSTAV BECKER STORY by Karl Kochmann A very interesting book dealing with the family and history of this famous clock making company. Areas covered are the growth and clock styles from 1847 until 1927. Text in both German and English. 2000 edition. 120 pages. Soft cover. | 0412 002226 In our Central Store Availability: Click Here |
|  | THE CAMERER CUSS BOOK OF ANTIQUE WATCHES A completely revised edition of the standard work of reference including an illustrated chronology of the development of the watch. 332 pages. Hard cover. | 0412 003526 In our Central Store Availability: Click Here |
|  | BRADBURY'S BOOK OF HALLMARKS by Frederick Bradbury Pocket guide to origin marks on English, Scottish and Irish silver, gold & platinum and imported silver & gold plate 1544 to 1992. Old Sheffield plate marks 1743-1860. 107 pages. Soft cover. | 0412 001226 In our Central Store Availability: Click Here |
|  | THE BULLE CLOCK - Practical Manual The original Bulle Practical Manual, translated by Robert H A Miles. Fully illustrated workshop manual describing the theory of operation and adjustment of these fine battery clocks. 55 pages. Soft cover. | 0412 021626 In our Central Store Availability: Click Here |
|  | ILLUSTRATED DICTIONARY OF HOROLOGY | 0412 013026 In Archived Storage. Delay possible. Availability: Click Here |
|  | WATCH & CLOCKMAKERS OF THE WORLD VOL 2 by Brian Loomes This volume supplements volume 1 with a further 35,000 names, both before and after 1825. It complements the first volume to make an excellent reference. 299 pages. Hard cover. | 0412 000626 In our Central Store Availability: Click Here |

| BAROMETER TUBE FILLING KIT Price per unit | | | | | | |
|  | BAROMETER TUBE FILLING KIT With this simple kit you can drain, clean, rinse and refill old tubes and ofcourse fill out new tubes with mercury. This kit includes a syringe and fine tubing that will go around the U bend of most tubes, (even below 1mm bore). Supplied with detailed and illustrated instructions. Cleaning fluid, mercury, etc. are not included. | 0796 000115 | In our Central Store | Availability: Click Here | | |
|  | BAROMETER FILLING KIT REPLACEMENT TUBE Replacement fine tubing for part number 0796 000115 | 0796 000215 | In our Central Store | Availability: Click Here | | |
| BAROMETER TUBE CLEANER 125ml Price per unit | | | | | | |
|  | BAROMETER TUBE CLEANER 125ml If you plan to use our kit to drain, clean and refill an old tube, you will need this concentrate to remove as many of the stains as possible. Dilute with 5 parts of warm water. You will need our filling kit. | 0799 012515 | In our Central Store | Availability: Click Here | | |
| BAROMETER TUBES Price per unit | | | | | | |
|  | UNFILLED WHEEL BAROMETER TUBE Complete with guidetube, float & counterweight. Distance from edge of main tube to edge of U tube 23mm. Height of U tube 140mm. Main tube external diameter 8mm. U-bend tube 10mm o/d. 8mm i/d. Pyrex wheel tubes complete with float, counter-balance and guide tube. Pyrex is used to avoid the mercury staining that occurs on soda glass. The tubes are very high quality, and the float is an accurate fit. This reduces the evaporation of toxic mercury vapour to minimal levels, and also ensures that small changes in pressure register. 3mm capillary. 33 1/2" overall length. Mercury capacity 160g. Top chamber 80mm long. 13mm o/d. U section 140mm high with a tight bend to keep overall width to a minimum. Supplied unfilled. | 0780 000115 | In our Central Store | Availability: Click Here | | |
| WHEEL TUBE PLUG Price per unit | | | | | | |
|  | WHEEL TUBE PLUG Insert this into the filled tube. It will hold the mercury in place. Always transport the tube vertically. Mercury will still pass the plug if you wave it about or allow the mercury to expand through heat. | 0910 000115 | In our Central Store | Availability: Click Here | | |
| SEMI-HARD BRASS WIRE Price per unit | | | | | | |
|  | SEMI-HARD BRASS WIRE For return springs on American movements and for retaining glass barometer wheel tubes in place. 3 metre length. 0.4mm. | 0240 000315 | In our Central Store | Availability: Click Here | | |

16. Public Clocks

Turret clocks & Cupolas. Weathervanes. Clock controllers.

TURRET CLOCKS

Complete clocks ready for mounting onto cupolas, turrets or walls. Fully weatherproof. Convex glass fibre dials with stainless steel hands. Hands and numerals are gold leafed except on white models, which are black painted. All use 240v. 50Hz. and can be fitted with optional re-synchronizers. The domestic movement uses a 24v transformer. The heavy duty unit is a high quality mechanism with rear setting index etc. Optional Radio control is also available in most areas to ensure accuracy. Easily installed by fixing with brass wood screws & mastic.

| Nominal Size | Outside diameter | Actual face diameter | Numeral height | Movement used |
|--------------|------------------|----------------------|----------------|---------------|
| 1' | 330mm | 270mm | 40mm | Domestic |
| 1'6" | 480mm | 395mm | 65mm | Domestic |
| 2' | 595mm | 510mm | 85mm | Standard |
| 2'6" | 820mm | 750mm | 100mm | Standard |
| 3' | 945mm | 815mm | 130mm | Intermediate |
| 4' | 1210mm | 1075mm | 165mm | Heavy Duty |
| 5' | 1500mm | 1340mm | 205mm | Heavy Duty |

MECHANISMS & CONTROLLERS

Synchronous clocks are the most common type of clock mechanism. These derive their timekeeping from the electricity supply company who go to great lengths to provide an accurate mains frequency of 50 cycles per second. Even if it were to drop slightly during a period of extreme demand, they normally make it up later to maintain an overall accuracy. Hence the name synchronous, being synchronised with the supply. A simple 240v 50Hz. supply is needed. Overseas customers should check their local voltage and frequency before ordering. The voltage can be changed by a transformer, but the 50 cycles per second (Hz.) controls the timekeeping. Some countries such as the USA use 60Hz. The current consumption is minimal.

These clocks are dependant upon a continuous mains supply. If it fails they will stop and resume again when the supply is returned. They will then be slow by the duration of the power failure.

Battery back-up devices are available which cut in as soon as a power failure is detected. These keep the clocks running for a number of hours (depending on their capacity and the number and size of the motors) and are re-charged automatically when power is resumed. The result is that short failures have no overall effect on the timekeeping, but eventually the batteries run out and the clock stops.

Re-synchronizers also have re-chargeable batteries, but these do not attempt to drive the clock. The unit records the position of the hands when the failure took place. When power is resumed, the supply to the motor is not allowed through the unit until 12 hours (or multiples of 12) have elapsed since the failure took place. In effect, it waits until time catches up with the stationary hands and off they go. So, no matter how long the power cut (within reason) the clock will be re-synchronised with the mains supply within a maximum of 12 hours after power is restored. These units also make the change from summer time and GMT very easy. At the flick of a switch, the clocks stop for 1 hour or stop for 11 hours. The 11 hours pause effectively advances the clock by one hour.

The two systems can be combined, so that short power cuts have no effect, whilst long ones are corrected automatically.

Pulsed mechanisms work on a 'master and slave' principle. This is particularly advantageous when many faces are used, perhaps throughout a factory complex or hospital. They all show the same time, as they each get the same pulse every half or one minute from a master controller. Pulsed mechanisms depend upon the electricity supply to their master.

Radio master controllers monitor the signals from an atomic clock periodically. This is checked against the position of the hands and should any discrepancy occur, the hands are adjusted automatically. This provides very accurate timekeeping, and the BST/GMT time changes are made automatically. It can control up to four slave clocks.

They have rechargeable batteries. Battery back-up units can be fitted to these, to maintain power during short failures. However, backup devices do not maintain the same time accuracy as the domestic electricity supply companies, so they are not recommended for synchronous movements except in areas of frequent short failures.

17. Watchmakers' tool & supplies

Case openers. Battery testers. Storage boxes, oilers, hand removers. Link removers. Spring bars.
